Here is the Oxalic Acid vaporizer I made. I watched several YouTube videos and this is what I came up with.

I cut a piece off of some old copper pipe and made the bowl, being careful to keep it no more than 5/8” tall. I then attached some 3/8” copper tubing to accept the heating element.

I used and AC Delco 60G glow plug that I believe is used in a 96 Jetta. It was less than $10. I deformed the copper tubing a little bit so that it would receive the threads of the glow plug. All this is then attached to a barbeque skewer and a switch added for better control. A car battery powers the unit.

The process requires all openings to be sealed while the unit is installed and turned on for 2 ½ minutes. Please watch YouTube videos for more information. THE VAPORS GIVEN OFF ARE EXTREMELY DANGEROUS. WEAR PERSONAL PROTECTIVE EQUIPMENT.

It is recommended that 1 gram (1/4 tsp) of Oxalic acid be used per brood box. The best time to use it is in December when the mites are not protected in capped brood. DO NOT USE WHEN HONEY SUPERS ARE IN PLACE.
